

Composite door care & maintenance

Keep your door looking great for longer

Your new composite door should keep safe and secure for years to come. However, with all products, and especially those that are exposed to the elements, we recommend that you carry out a care and maintenance routine.

Cleaning your door

- Doors and door frames should be washed with warm soapy water and a lint free cloth.
- Stubborn stains can be removed using specialist PVC-u cleaners, please follow the cleaning guidelines carefully.
- The door leaf should only be cleaned using warm water or non-aggressive composite door wipes. No solvent-based product or abrasives should be used as these will damage the surface of the skin.
- External glass should be cleaned with warm soapy water and cleaned with a proprietary glass cleaner.
- Hardware can be cleaned with a mild detergent and wiped clean. No harsh chemicals or abrasives should be used.

Maintaining your door

- Maintenance of the door may be required to maintain any guarantees from the installer.
- Hinges should be lubricated with engineering oil.
- Cylinders can be lubricated with Teflon-based products only, as other oils may cause degradation.
- If necessary, a small amount of lubricant can be applied to the moving parts such as letterplates, handles and knockers.
- We also recommend that you help protect your door from possible natural thermal distortion by engaging the locking points by simply pulling up the handle each time you shut the door.
